AAT
Name $\qquad$
4-1 Magnitudes of Rotations and Measures of Arcs

Date $\qquad$

Warm Up: Considering basic arithmetic, what are the pros and cons to using feet and inches to measure length? What about using centimeters and meters?

## Introduction

A circle is the set $\qquad$ on a plane that are a fixed $\qquad$ from a point. A rotation is a transformation that " " the point along the circle. Label the image, preimage and center of rotation.

Revolutions and Degrees

| Full Turn | Half Turn | Quarter Turn |
| :---: | :---: | :---: |
|  |  |  |
|  |  |  |
|  |  |  |

Convert the following degrees to revolutions:
a. $720^{\circ}$
b. $200^{\circ}$
c. $400^{\circ}$
d. $1080^{\circ}$

## Questions The Case for Radians

Degrees and revolutions can tell about the size
$\qquad$ but nothing about the
$\qquad$ . Enter radians.

Common Conversions:

| Degrees | $0^{\varrho}$ | $30^{\varrho}$ |  |  | $90^{\varrho}$ | $120^{\varrho}$ |  | $150^{\varrho}$ | $180^{\varrho}$ | 360 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Radians |  |  | $\frac{\pi}{4}$ | $\frac{\pi}{3}$ |  |  |  |  |  |  |
| Revolutions |  |  |  |  |  |  | $\frac{3}{8}$ |  |  |  |

Example 1:
a. Convert 1000 to radians exactly.
b. Convert $1000{ }^{\circ}$ to radians approximately.

Example 2: Convert 1 radian to degrees.

## Example 3

Find the length of an arc of a $50^{\circ}$ central angle in a circle of radius 6 feet.

## Circle Arc Length Formula

If $s$ is the length of the arc of a central angle of $\theta$ radians in a circle of radius $r$, then $s=r \theta$.

| Example 4 | Questions |
| :--- | :--- | :--- |
| A swing hangs from chains that are 8 ft long. How far does the seat of the |  |
| swing travel if it moves through an angle of 1.25 radians? |  |
|  |  |
| Example 5: The swing height can be adjusted to accommodate a  <br> taller person by shortening the length of the ropes to 7 ft. How far  <br> would the seat of the swing travel if it moves through an angle of  <br> 1.5 radians at the shorter length.  <br>   |  |

## Summary:

| $1 \mathrm{rev}=$ |  |  |
| :--- | :--- | :--- |
| $1 \mathrm{o}=$ |  |  |
| $1 \mathrm{rad}=$ |  |  |
| $\pi \mathrm{rad}=$ |  |  |

## AAT

4-1 Magnitudes of Rotations and Measures of Arcs

In 1 and 2, the magnitude of a rotation is given.
a. Convert the magnitude to revolutions.
b. On the circle draw the image of the given point under the rotation.

1. $-225^{\circ}$

2. $\frac{7 \pi}{2}$
a.
b.

a. $\qquad$
b.

3. Give two other magnitudes in degrees, one positive and one negative, for a rotation of $152^{\circ}$.
4. Give two other magnitudes in radians, one positive and one negative, for a rotation of $\frac{5 \pi}{6}$.

In 5-7, convert to a magnitude in radians without using a calculator.
5. $30^{\circ}$ $\qquad$ 6. $45^{\circ}$ $\qquad$ 7. $-240^{\circ}$ $\qquad$

In 8-10, convert to a degree measure without using a calculator.
8. $\frac{\pi}{10}$ $\qquad$ 9. $\frac{11 \pi}{6}$ $\qquad$ 10. 3.14159 $\qquad$

In 11-14, convert the given magnitude to the indicated unit to the nearest thousandth.
11. $-37^{\circ}$
a. to revolutions
b. to radians
$\qquad$
12. $17 \pi$
a. to revolutions
13. 17
a. to degrees
b. to radians
14. $0 . \overline{3}$ revolution clockwise
a. to degrees
b. to radians
